Informational Bulletin **ICD Technical Bulletin #70-05**

Warning Labels

Date:	**May 15, 2007**
Supersedes Date:	**9/10/90; 4/21/06**
Bulletin Number:	**#5**
Subject:	Warning Labels Compatible Adhesives - Specifically: Labeling

The proper use, application and handling of OPACI-COAT-300® are necessary to its performance as specified and expected. Each lite of glass must bear a warning label such as the following:

These plastic coated, pressure sensitive labels, in rolls of 1,000 are available for purchase from ICD. If you have these labels made or are making them, a plastic coating must be applied to the surface to prevent leaching of the color unto the next lite.

Recently a contractor installed some OPACI-COAT-300® coated wall cladding glass with a mirror mastic (solvent based) adhesive with the expected deleterious results. There is a good chance that the contractor was not fully informed about compatibility and that the lites going to the job did not have the required labels. Please make sure this doesn't happen to one of your jobs. Give your glazier copies of the installation information from your Technical Manual, and be sure each lite is labeled.
